Issue	How we solved it	
Game ran much slower in the build than it did in the Unity test window.	We went to Build Settings > Project Settings > Player and ensured we selected 'Fullscreen Window' and ticked the checkbox next to 'Default is Native Resolution'. 	
Randomly corrupts my files with no error log or anything	Creating a new project	
Different sized images when slicing up tile sheets (usually in the case that you wanted more than 8 tiles). Image is not 2048x1024.	Try 'Grid by Cell Count' instead of 'Isometric Grid'.   Note: the other solution is to change the sizes to suit the size of ***your*** image.	
Cannot access 'Sample Rate' to change from 60 to 12 in the animation window.	Click three dots on right hand side of the window and select 'Show Sample Rate' 	

		
Cannot access the “Tile Palette” window		
Cannot permanently change the size of the camera: Enter the .cs file for the camera follow code and change the value “cam.orthographicSize” from 15 to your desired value.	 	
Wormy friend not die when touch	Don’t forget to click ‘is trigger’ in the collider 	

Pixel Art Sprite had different colours in unity than in photos and lost details.  When it should've been 		
Tiles when placed are very small 	Change the pixels per unit of your tileset image to a smaller number (then press apply) 	

Want to change the hitboxes of tiles (You can see the hitboxes by clicking the grid: )	In the sprite editor of the full tileset image  , Change the dropdown in the top left to ‘Custom physics shape’  , Click on the tiles you want to change, press ‘generate’ and move the points to make a shape. Press ‘Apply’, then in the ground object, find the tilemap collider, press the 3 dots and then press ‘Reset’ 	
Obstacles can be passed through but the floor stays solid 		
The Unity interface is missing all of your scenes inspector etc and you can’t open any of them and are stuck in the project folder and even after restarting you can’t fix it. 	All you have to do is click Shift + Space which then returns it to normal and you can edit your scene. 	

Sign in button doesn't work on Unity Hub	Restarting your computer	
Screen tearing in the final build of the game	Setting VSynch to Every V Blank Under Edit → Project Settings - > Quality Link to solution thread- https://discussions.unity.com/t/weird-glitchy-lines-traveling-from-top-to-bottom-of-the-screen-when-camera-moves-in-build/931242	

FPS jumping and dipping causes your sprite to go faster and slower.
 
 	
	Create a new C# file in Scripts. Name file FPSLimiter. Click on new file. Delete everything and paste in the code. Save the code. Create a new child under hierarchy. Name it FPSLimiter. Drag new C# file into the child. Or you can just follow the YT Tutorial Unity C# Tutorial - How to set target FPS | How to limit FPS in your game in Unity (youtube.com)
	
	`using System.Collections;`
	`using System.Collections.Generic;`
	`using UnityEngine;`
	
	`public class FPSLimiter : MonoBehaviour`
	`{`
	`  public int targetFPS = 60;`
	
	`  void Start()`
	`  {`
	
	`QualitySettings.vSyncCount = 0;`
	
	`Application.targetFrame`	

	``
	Rate = targetFPS;
	    }
	}
	``	

The error *'AnimationEvent has no function name specified'* appears, even when the game is otherwise fine	Find any Animation Events in your animations and ***TH  	
Following errors appear without any scripts or whatnot written. 	Unity errors: 	Install Errors on Personal Device. No known fix. Using School PCs is best solution. Sorry can't resolve.
When playing the game, the character walks. When it is built and run, the character stats are in the same position and can only jump	Unity6_Build_Run_Freeze_Fix.md	

Unity errors: 	Install Errors on Personal Device. No known fix. Using School PCs is best solution. Sorry can't resolve.	
Build and Run (doesn't work) but works in game preview		SpriteMovementFix.md
